Top-notch support Call us for ordering questions or email us for Tech Support! Secure payments Paypal, Visa, MC, American Express or Discover! WARNING: Cancer and Reproductive Harm - www.P65Warnings.ca.gov © 1996-2014, Amazon.com, Inc. or its affiliates An X10 Lamp Module provides one of the most basic ways to automate lighting in your home. The module plugs into a standard 110 VAC power outlet, and an incandescent lamp plugs into the module. Once installed, the module is controlled with an X10 controller. You can easily install X10 lamp modules in five simple steps. IMPORTANT: Before you install X10 lamp modules, you'll need to have an X10 controller. The X10 Mini Controller (MC10A) and the X10 Palm Pad Controller (HR12A) are both quite popular and inexpensive. 5 Steps to Install X10 Lamp Modules Once you've followed these instructions, you'll be able to control a plug-in lamp with a remote! Step 1 Choose an X10 module that is rated for the lamp you will be controlling. For example, if your lamp uses a 60 Watt light bulb, then you need a lamp module that supports 60 Watts or more. Your best bet is the LM465 model, which is the most widely available X10 Plug-In Lamp Module. It supports up to 300 Watts. Step 2 Plug your lamp into the X10 Lamp Module, and then plug the module into a power outlet. Now you're ready to program the module to allow communication with your X10 controller. Step 3 When you install X10 lamp modules, you need to set two different codes (HOUSE and UNIT) on each module. The module has two recessed dials to set these codes. The dials can be turned with a straight-edge screwdriver. IMPORTANT: Make sure the module is turned OFF during programming. Set the Codes: Set the HOUSE Code (Red) to one of the 15 alphabetic codes (A-P). (If you're adding the module to an existing X10 controller, set the HOUSE code to match your controller's HOUSE code.) Set the UNIT Code (Black) to one of the 16 numeric codes. (Each X10 device that you connect to your controller must use a unique UNIT code.) Step 4 Plug your X10 controller into a different power outlet, and set its HOUSE code to match your module's HOUSE code. This is accomplished through the same type of dial as the module's dial. Once the module and controller are both plugged in, and their HOUSE codes are matched, the two devices can communicate with each other over your home's power lines. Step 5 Toggle the Lamp Module's on/off switch to the ON position, and use your X10 controller to turn the plugged in lamp on/off remotely! You can read the manual on how to install X10 Lamp Modules here: Home › X10 Product Manuals and Instructions choosing a selection results in a full page refresh The Telephone Responder turnsonupto10lightsorappliancesfromanytelephoneintheworld!Soyou cantumon your centraiheatingor airconditioning beforeyouleavework.
